DEPARTMENT

Design & Build

01. SUMMARY & PROJECT UNDERSTANDING

DOVA Futures Limited has reviewed the Lush Construction Materials Buying Guide (updated June 2026) in relation to a proposed store at Jabi Mall, Abuja. Based on the current requirements and a preliminary review of Nigerian supply routes, we consider the project feasible in principle. Most fabrication, installation and conventional construction work can be completed in Nigeria; selected brand-critical or certification-sensitive items should be imported. With early approvals, samples and procurement planning, the imported materials can be scheduled to arrive before the agreed store-opening date. This assessment is preliminary and is not a final bill of quantities, quotation or construction commitment.

02. LUSH ETHICAL & MATERIAL REQUIREMENTS

The procurement basis is: prioritise reuse and refurbishment; use recycled, recyclable or rapidly renewable materials; use traceable responsibly sourced timber; and select low-VOC, cruelty-free, animal-free products with EPD or equivalent evidence where required. Materials and suppliers on the Lush red-flag list will not be used. The guide excludes new tropical hardwood (reclaimed material may be considered with evidence), virgin acrylic, PVC, neoprene and animal-derived products, and treats MDF/HDF as prohibited unless Lush expressly approves it. Every selected product must still satisfy Nigerian fire, health-and-safety, commercial-use and landlord requirements.

03. NIGERIAN SOURCING & MATERIAL SCHEDULE

CATEGORY	RECOMMENDED ROUTE / CONDITION	ROUTE	POSITION
Glass & mirrors	Local Abuja processing (for example Abumet); confirm toughened/laminated specification and evidence.	Local	Use conditionally
Steelwork & shopfitting	Local fabrication; use mechanical fixings and recycled-content evidence where available.	Local	Use

CATEGORY	RECOMMENDED ROUTE / CONDITION	ROUTE	POSITION
Screed & tile adhesive	Sika Nigeria/Abuja products; confirm VOC, animal-free status and product documents.	Local	Use conditionally
Partitions & ceilings	Knauf/approved equivalent through a Nigerian distributor (for example Skein); obtain EPD, recycled-content and fire data.	Local purchase	Use conditionally
Flooring	Recycled-content porcelain such as RAK Re-use, subject to slip rating and Lush approval.	Local purchase	Preferred local route
Furniture & refurbishment	Reuse or refurbish first; fabricate locally with compliant boards and approved finishes.	Local / hybrid	Use
Timber joinery	Garnica poplar or Metsä/Lamboard certified Finnish pine; Nigerian timber is conditional on legality, chain-of-custody and treatment evidence.	Hybrid	Import boards
Worktops	Polygood/Smile Plastics; Cirkulla/Zizaplast samples may offer local recycled-plastic alternatives; painted certified timber plus glass is the fallback.	Hybrid / import	Import preferred
Paint & coatings	Crown EPD products; a Nigerian alternative requires an ISO 14025 EPD (or equivalent), low VOC, cruelty-free, no animal derivatives and environmental evidence.	Import / conditional	Import preferred
Lighting	Prolight or an approved recycled-aluminium equivalent with take-back evidence.	Import	Import preferred
Signage & displays	Local fabrication with non-PVC graphics; import recycled acrylic/PP where the specification requires it.	Hybrid	Conditional
Insulation	Knauf/approved equivalent with required recycled/renewable content, EPD and fire data.	Local purchase / import	Conditional
Exclusions	New tropical hardwood (reclaimed exception with evidence), virgin acrylic, PVC/neoprene, animal-derived products and red-list suppliers; MDF/HDF is not used unless Lush expressly approves it.	—	Do not use unless approved

Interpretation: "Local" means Nigerian manufacture or fabrication; local stock does not by itself establish Lush compliance. Every product requires documentary review and sample approval.

04. DELIVERY STRATEGY & CONTROLS

- 1. Local first.** Use Nigerian fabrication and locally available certified systems for glass, steelwork, partitions, ceilings, screeds, adhesives, tile procurement, furniture and installation.
- 2. Import early.** Import the Lush-approved timber boards, worktop sheets, specialist paint, Prolight lighting and recycled display materials where local alternatives cannot demonstrate compliance. The guide's examples include 12 weeks for Metsä timber, 8 weeks for Mosa tile and 2–4 weeks for glass; obtain live quotations before fixing the programme.
- 3. Control every substitution.** No substitute is to be purchased until Lush approves the sample and the supplier provides country of origin, EPD/recycled-content data, FSC/PEFC claim where relevant, VOC/SDS, fire/slip performance, warranty and take-back information. Imports must be planned with SONCAP and customs requirements.
- 4. Confirm the project inputs.** Before detailed design, obtain the store area/layout, opening date, budget, landlord's current Jabi Mall fit-out manual, fire/MEP requirements and final Lush finish approvals.

05. CONCLUSION

DOVA Futures Limited considers the proposed Lush store at Jabi Mall, Abuja achievable in principle. Nigerian suppliers and contractors can deliver much of the fabrication and installation, while selected brand-critical materials can be imported with sufficient lead time. The next stage is to confirm the mall and design information, obtain samples and certificates, agree any substitutions with Lush, and issue a detailed procurement and programme schedule. This draft is a preliminary feasibility assessment and should not be treated as a final BOQ, quotation or unconditional delivery guarantee.
